Policy Rationale
CCAE has a duty of care to provide a safe workplace for staff, students and visitors. This obligation includes the provision, regular testing and maintenance of safe electrical equipment.

Policy Aims
To provide safe electrical equipment for staff, students and visitors to use.

Procedure – Electrical Safety
- Electrical equipment, including leads and cables, will be routinely tested and tagged as required by a competent trained and qualified person to the AS/NZS 3760:2001 Electrical Safety Standard.
- All electrical equipment, including leads and cables will be tested and tagged prior to initial use, as well as after being serviced or repaired.
- All safety switches (Residual Current Devices) will be tested by an ‘A’ grade electrician.
- All CCAE computers will also be tested and tagged as required by the Standard.
- Regular testing of equipment will form part of the school’s annual inspections and servicing contracts.
- A recording system with dates and results of tests form an important component of annual testing, and will be stored in the school office for referral.
- Staff members will treat all electrical equipment including leads and cables with care.
- Staff members who notice damaged, worn or abused electrical equipment must ensure that the equipment is not used, and report the incident to the Occupational Health and Safety officer immediately.
- CCAE will endeavour to ensure that cables and leads are minimised, and are appropriately fixed to walls etc to minimise flexing and potential abuse.
- CCAE will maintain a supply of tested and tagged electrical cables, leads and power boards for use as required.
- CCAE will include within its annual budget, an allocation for annual testing and tagging of electrical equipment as required.

Evaluation
Policy will be reviewed bi-annually.
